

ONLINE COLLABORATION

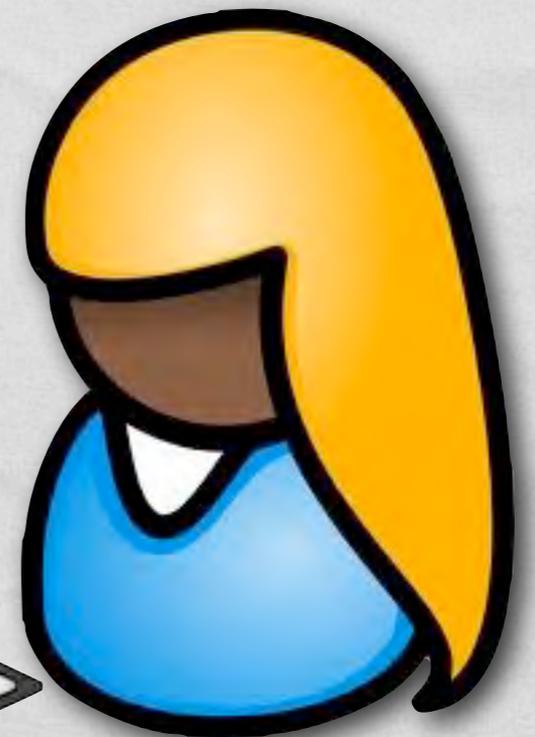

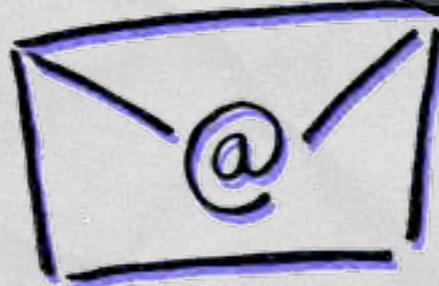

KEITH BRADNAM

A talk for the Davis Community Network, 10th April 2012

OVERVIEW

Bob

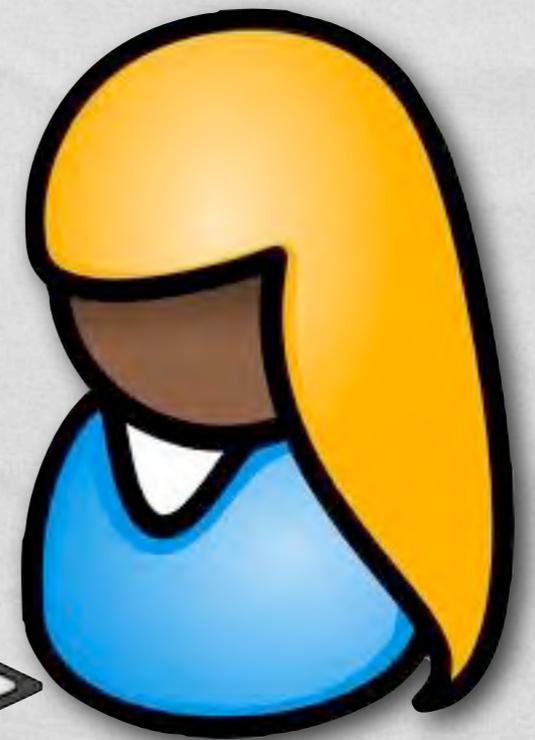

Alice

We often end up using email to share stuff with collaborators. Email is often not the best tool.

OVERVIEW

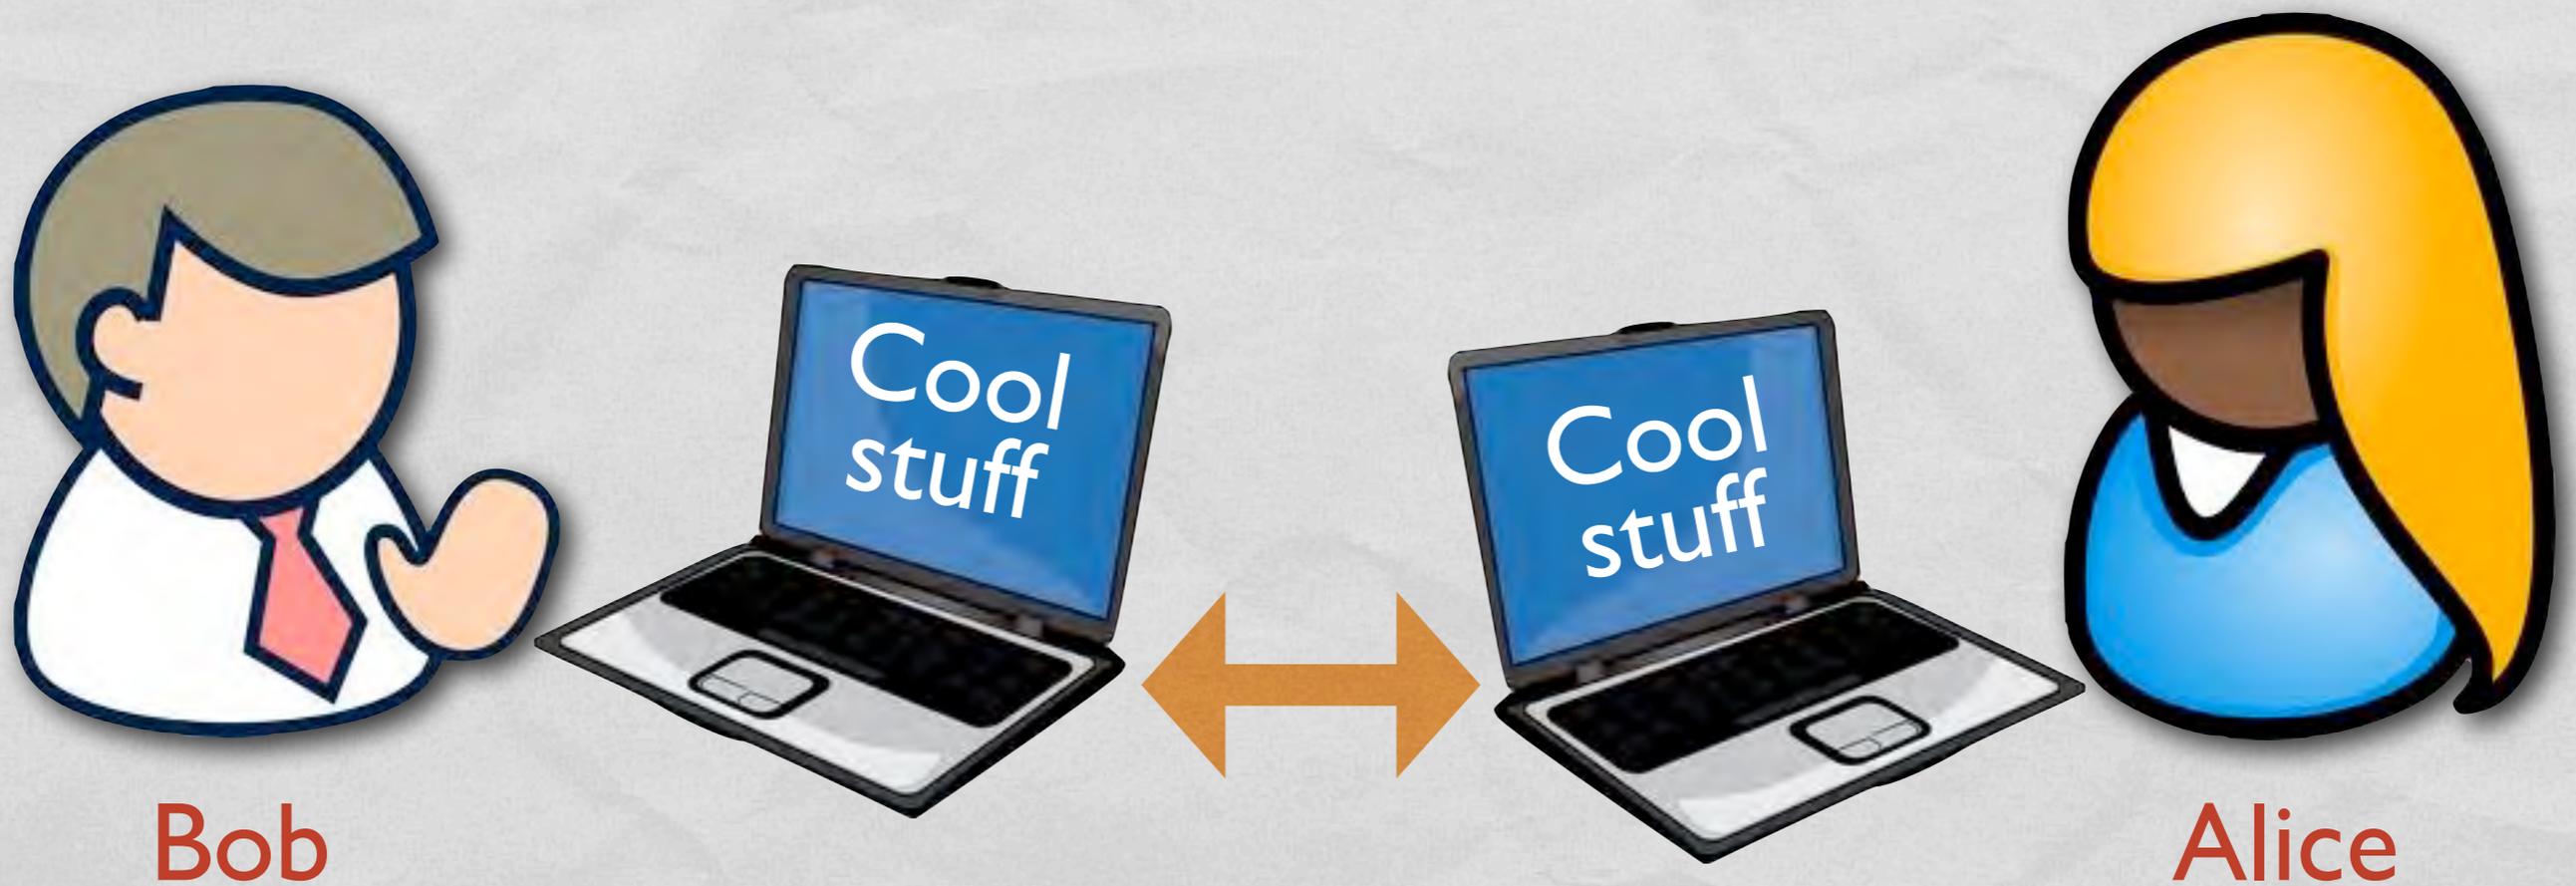

Bob

Alice

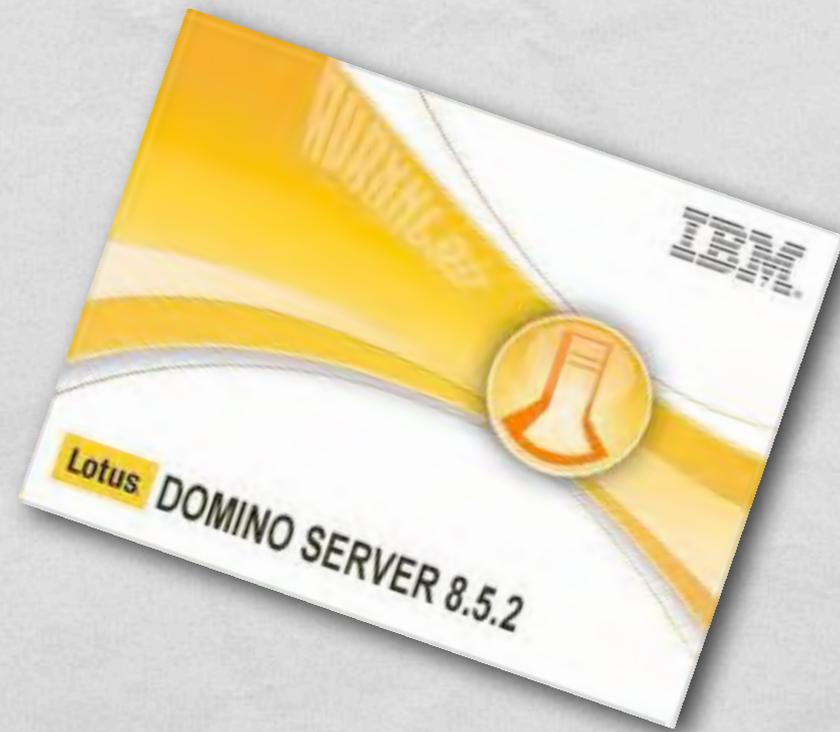

OVERVIEW

Ideally we want things to data to magically sync between computers

THIS IS NOT ABOUT...

Microsoft Project Server & Lotus Domino Server are big project management tools that allow you to collaborate online...not the subject of this talk.

THIS IS ABOUT...

- Relatively simple software that:
 - enables you to do 'stuff' collaboratively
 - is (mostly) free
 - is (mostly) web based
 - helps you avoid using email to share stuff

5 CAVEATS

I) CHOICE

- There is a LOT of free software out there!
- I haven't used most of it!
- These are *suggestions* of some popular tools

2) SUSTAINABILITY

- Some free software tools have a short shelf life:
 - vanish because they weren't making money
 - get wiped out by competitor
 - get bought out by bigger company

SUSTAINABILITY

Grand Central + Google = Google Voice

Writely + Google = Google Docs

Lala + Apple = RIP

Instagram + facebook = ???

It can be dangerous to make long term plans!

Small — and often useful — companies often get bought out by bigger companies, who may not want to keep them in their current state.

3) PRICE

- Not all free software remains free
- Some applications keep *basic* functionality for free
- Some software is free on the web but you pay for smartphone apps

4) PLATFORMS

- Are you a Mac or Windows user?
- Will you *always* be a Mac or Windows user?
- Collaboration software is often web-based, but...
 - some companies also release desktop apps
 - some companies release phone/tablet apps...
 - ...but not always for all platforms

5) PRIVACY

- Do you trust another company to handle your data?
- Check privacy policy from companies

SOME TOOLS TO CONSIDER

BLOGGING

BLOGS

- A great way to share text, pictures, audio, and movies
- Blogs can (usually) be made private:
 - Can create a blog as an internal online newsletter
 - Use to share page layout ideas between colleagues
 - Wedding planning

BLOGS

- Most have similar set of features:
 - use Email to create blog posts
 - iPhone/Android apps
 - scheduled posting
 - allow multiple authors

BLOGGER

- Part of Google
- Free
- Can make money by adding ads

Title: The Molluskan Zodiac [Edit](#)

Description: Divining the future from the mysterious marine life of the world's oceans. The molluskan horoscope is the only horoscope that is based on marine invertebrates and has been scientifically calculated to be 1.6x more accurate than traditional western astrology, and 2.4x more accurate than Chinese astrology. Blog Readers

- Anybody
Your blog is open to all readers by default.
- Only these readers
You can restrict your blog to only readers you choose. However, these readers will need to log in before reading your blog, adding an extra step. We'll save your readers list for you, so you can switch back at any time.
- Only blog authors
Your blog is restricted so that only blog authors can read it. Other visitors to this blog will not be able to read any posts; instead they will get a message stating that this is a private blog.

[Save changes](#) [Cancel](#)

Also, most blogs allow you to make a blog private to a selected group of authors.

TUMBLR

- Free
- More options for groups
- Can allow 'submissions'
- Can call a number to record audio post

tumblr.

WORDPRESS

- Free (with ads)
- Can pay to remove ads
- Can add 'pages' as well as blog posts
- Other paid upgrades available

POSTEROUS

- Free
- No ads
- Can add 'pages' as well as blog posts

Recently purchased by twitter. Long-term future is uncertain.

UNIX AND PERL FOR BIOLOGISTS

HOME

NEWS

HOW TO GET HELP

EXAMPLE FILES

ABOUT THE AUTHORS

HOME

Image conceived by K. Bradnam and drawn by [Corrie Haffley](#).

This is the website to accompany the [Unix & Perl For Biologists Primer](#) and the 'Unix and Perl to the Rescue' book that were both developed and written by [Keith Bradnam](#) and [Ian Korf](#). You can use this site to [get help](#) with the material covered by the primer and the book, download [example files](#) used in the book, or just find out more [about the authors](#).

Since we first started teaching this material as a graduate student course at [UC Davis](#), we have seen how transformative it can be for a student to learn even a small amount of programming knowledge. Unix and Perl are both great tools for helping making sense of data and the average biologist today has a lot of data to make sense of. Sometimes the world of programming can seem very alien to someone who has never written code before. But just like learning a foreign language, even a little bit of knowledge can go a long way.

Whenever we have taught this material we have tried to not make any assumptions about prior knowledge and have also tried to only teach one new concept at a time. Furthermore, we have tried to

```
#!/usr/bin/perl  
choose strict;  
choose warnings;  
choose life;
```

KEITH & IAN

This site contains information relating to the [Unix & Perl For Biologists Primer](#) and the 'Unix and Perl to the Rescue!' book that were developed by Keith Bradnam & Ian Korf.

Blogs like Posterous allow you to make fully-formed websites, with multiple pages. Posterous even allows you to register a web domain when you create your blog.

Posterous Demo

FILE TRANSFER

DEALING WITH BIG FILES

- Email usually has a limit for attachments (~10–50 MB)
- Photos from digital cameras are large
- Videos are even larger
- Email is not the best tool to transfer large files!

WEBSITE ALTERNATIVES

- There are a LOT of website that will allow you to upload large files for free
- Really LARGE files
- Others can then download them
- Privacy concerns?

WETRANSFER.COM

- Free
- Upload files up to 2GB
- Files stored for 2 weeks
- No account needed

GE.TT

- Free
- Upload files up to 2GB
- Files stored for 3 months
- Provides web links to files

SENDUIT.COM

- Free
- Upload files up to 1 GB
- Files stored for 30 minutes to 1 week
- No account needed
- Provides web links to files

senduit

Sometimes you only want to share files for a limited period of time.

FILEDROPPER.COM

- Free
- Upload files up to 5GB!!!
- No account needed
- Provides web links to files

File Transfer Demo

ONLINE FILE STORAGE

The cloud is the internet. It acts as the intermediary in syncing files (and other data) between multiple computers (and other devices such as smartphones and tablets).

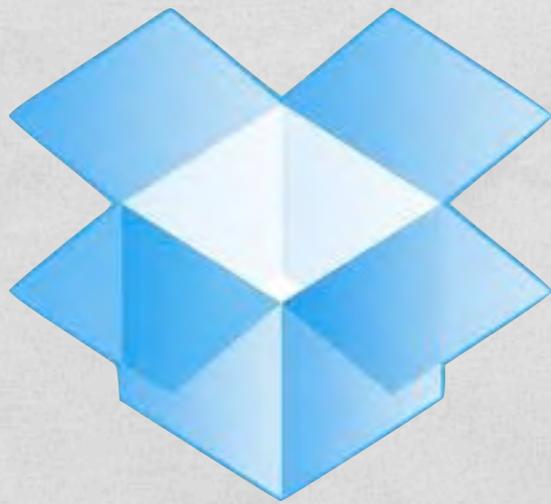

Access to your data 'in the cloud' is often provided through a web browser.

WHY STORE FILES ONLINE?

- Sync between all of your computers & devices
- Online access to files
- Provides a form of backup
- Can *easily share* files with collaborators

3 MAJOR PLAYERS

Dropbox

box.net

SugarSync

All have slightly different features!

From box.net website. You want more features, you must pay.

WHY I LIKE DROPBOX

- 2 GB free online storage
- Relatively easy to get more free storage
- Keeps 30 days of history for any file
- Can view most file types on my phone
- Very easy to share folders with other Dropbox users

POTENTIAL ISSUES

- Collaborators may have more online space than you
- Not all data synced to smartphones automatically
- If you become reliant on it, you might end up paying for more storage
- Privacy

Dropbox Demo

I love Dropbox, find it incredibly useful for collaborating with work colleagues

ONLINE WRITING

ONLINE WRITING

- Many tools to let you write collaboratively
- Also let you make presentations, use spreadsheets, produce feedback forms
- Most tools track all changes made to a document, and let you collaborate in *real time*
- Most tools can import from Microsoft documents

NOT GOOGLE

- Writeboard
- Zoho (free for personal use)
- Dabbleboard (online whiteboard)
- Adobe Buzzword
- Microsoft Office
- And several more!

GOOGLE DOCS

- For documents, spreadsheets, presentations, tables, forms, and drawings
- Can also upload *any* filetype and store it on web
- Very mature product
- Great for sharing with others
- Offline access if you use Chrome browser

Tools like Google Docs offer you about 1% of the features provided by software such as Microsoft Word. Fortunately, this is the 1% of features you actually need and use.

Google Forms Demo

If you ever want to quickly get feedback from people on a specific subject, I can highly recommend Google Forms. Make a new form, send people the link, and watch the results appear in a spreadsheet.

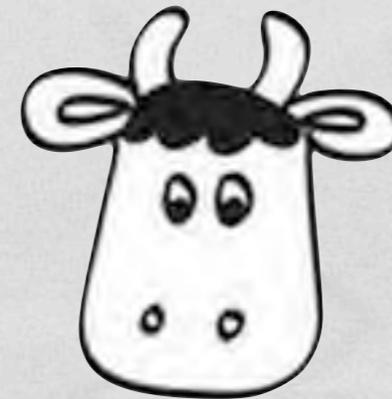

TASK MANAGERS

MANAGING 'TO-DO' ITEMS

- There are 100's of apps/websites that can manage lists of tasks
- Very few of these let you *share* lists
- Not all of them are free

REMEMBER THE MILK

- Free web service
- Paid phone apps
- No desktop app
- Easy to share lists with other users

WUNDERLIST

- Free service
- Web, desktop, and mobile apps
- Desktop apps for Windows, Mac, & Linux
- Can share lists with other users

Relatively new app, available for all platforms, and can share list items.

TRELLO

- A web-based app
- Allows you to make lists
- Fantastic for collaboration
- Free!

My fave app-du-jour. It's hard to explain what this app is doing, so I thoroughly recommend going to trello.com and spending a view minutes watching their excellent overview video. This service has completely changed how our lab works, communicates, and collaborates.

Trello Demo

DIGITAL SCRAPBOOKS

KEEP 'STUFF' IN ONE PLACE

- Some apps act as digital scrapbooks
- Can store: lists, notes, images, bookmarks, audio etc.
- Just use on the web, or sync to desktop/phone etc.
- Can share items/lists with other users

EVERNOTE

- Free web/desktop/mobile service
- Paid upgrade options (no ads)
- Can transcribe text from pictures
- Easy to clip material from webpage
- Store entire webpages
- Well supported service

Free version of Evernote only allows you to sync so much data per month. Collected notes are placed in 'Notebooks' which can optionally be shared with other Evernote users.

SPRINGPAD

- Free service
- Web and mobile, *no* desktop app
- Slightly different focus to Evernote
- Has web clipper tool like Evernote
- Sharing is all or nothing
- Adds 'value' to your data

Not so relevant for collaborating with others, but still a great web-based app.

ICLOUD

ICLOUD

- Free replacement for Apple's MobileMe service
- For Macs, iPhone, iPad, or iPod touch users
- Can share task lists, calendars, with other iCloud users
- Web apps + desktop + iPhone/iPad
- Can share files between desktop & iPhone/iPad

CALLING

CALLING

- Do you easily want to set up conference calls?
- Video conferencing?
- Distinction between phone/video/instant messaging apps is becoming blurred

SKYPE

- Free desktop app
- Now owned by Microsoft
- Free Skype-to-Skype calls
- Easy to set up voice conference calls
- Skype Premium account needed for video conference calls

GOOGLE VOICE

- Easy voice-conference calls
- Gmail tools:
 - I-on-I video chat via Gmail
 - Free PC-to-phone calls in USA
- Google+ tools:
 - Google Hangouts allows up to 10 people to video chat

APPLE ICHAT

- Up to 4 people can video chat
- You must have a Mac
- Can chat to Yahoo
- FaceTime

WHAT ELSE?

WHAT HAVE I MISSED?

- Calendar apps
- Scheduling apps
- Many, many, more!
- Everyone is moving software to the cloud

timetomeet.info is my preferred choice for scheduling meetings.

SUMMARY

FINAL POINTS

- Try before you buy!
- Spend a week playing with software before you commit to using something
- There are nearly always alternatives to consider
- Remember your privacy

Don't just start using the first app you try!
