Mayor Beverly Johnson
City of Alameda
2263 Santa Clara
Alameda, CA 94501

Re: Central Valley Project Improvement Act Restoration Fund

Dear Mayor Beverly Johnson and Honorable Councilmembers,

We are writing to request that the member agencies of the Northern California Power Agency (NCPA), including the City of Alameda, support the Central Valley Project Improvement Act (CVPIA) Restoration Fund at its current funding level. The CVPIA mandates changes in management of the Central Valley Project, particularly for the protection, restoration, and enhancement of fish and wildlife. The Restoration Fund is critical to make mitigation and restoration efforts possible on streams and in wildlife refuges in the Central Valley, in the San Francisco Bay-Delta and on the Trinity River. At a time when pelagic fish populations, including endangered Delta smelt, are at historically low levels, Central valley salmon are declining, and restoration projects on the Trinity River are well behind schedule, we do not believe it is prudent to consider reductions to the Restoration Fund, as has been suggested by NCPA.

For the past year, we have participated, along with the Northern California Power Agency and other interested parties, in the CVPIA Program Activity Review. The purpose of this effort, led by the U.S. Bureau of Reclamation and U.S. Fish and Wildlife Service, is to evaluate performance of the restoration programs authorized by the CVPIA and to evaluate the degree to which the restoration goals of the Central Valley Project Improvement Act have been met. One goal of the assessment is to determine if the environmental provisions of the Act have been completed and whether a reduction in the collections into the Restoration Fund is warranted. While there have been many diverging stakeholder perspectives throughout this process, nearly all participants have agreed that the goals of the CVPIA have not yet been achieved and therefore no reduction in the fund is justified. The NCPA stands out as one party that seeks to reduce contributions to the fund.¹

¹ See March 6, 2007, letter from General Manager James H. Pope to Regional Directors Kirk Rodgers and Steve Thompson

We ask that the City of Alameda support continuing the Restoration Fund at current levels by urging the NCPA to end their effort to reduce payments into the Restoration Fund. Doing so will help ensure that current levels of funding continue to be available to protect and restore our natural resources, and hopefully prevent the future listing of additional species.

Thank you for your consideration. We would be glad to discuss this with you further or provide you with more detailed comments related to the assessment of the environmental provisions of the CVPIA.

Sincerely,

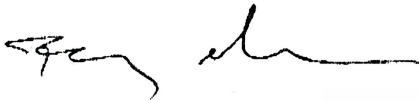

Gary Bobker

The CVPIA mandates changes in management of the Central Valley Project, particularly for the protection, restoration, and enhancement of fish and wildlife. The Restoration Fund is critical to make mitigation and restoration efforts possible on streams and in wildlife refuges in the Central Valley, in the San Francisco Bay-Delta and on the Trinity River. At a time when pelagic fish populations, including endangered Delta smelt, are at historically low levels, Central valley salmon are declining, and restoration projects on the Trinity River are well behind schedule, we do not believe it is prudent to consider reductions to the Restoration Fund, as has been suggested by NCPA.

For the past year, we have participated, along with the Northern California Power Agency and other interested parties, in the CVPIA Program Activity Review. The purpose of this effort, led by the U.S. Bureau of Reclamation and U.S. Fish and Wildlife Service, is to evaluate performance of the restoration programs authorized by the CVPIA and to evaluate the degree to which the restoration goals of the Central Valley Project Improvement Act have been met. One goal of the assessment is to determine if the environmental provisions of the Act have been completed and whether a reduction in the collections into the Restoration Fund is warranted. While there have been many diverging stakeholder perspectives throughout this process, nearly all participants have agreed that the goals of the CVPIA have not yet been achieved and therefore no reduction in the fund is justified. The NCPA stands out as one party that seeks to reduce contributions to the fund.¹

¹ See March 6, 2007, letter from General Manager James H. Pope to Regional Directors Kirk Rodgers and Steve Thompson

We ask that the City of Ukiah support continuing the Restoration Fund at current levels by urging the NCPA to end their effort to reduce payments into the Restoration Fund. Doing so will help ensure that current levels of funding continue to be available to protect and restore our natural resources, and hopefully prevent the future listing of additional species.

Thank you for your consideration. We would be glad to discuss this with you further or provide you with more detailed comments related to the assessment of the environmental provisions of the CVPIA.

Sincerely,

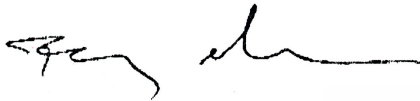

Gary Bobker
